ISSUED CROSS-REFERENCE REPLACED

Issued, Cross-Reference and Replaced events are similar and often get confused when they are submitted in the Canadian Livestock Tracking System (CLTS) database. This guide offers a better understanding of each event.

CROSS-REFERENCE | EVENT

A Cross-Reference Event is used to cross-reference an approved tag that has been lost with its newly applied approved tag number. This event can only be used when the lost tag number is known.

WHO REPORTS?

Any location such as a farm, auction, feedlot (intermediate sites) and abattoirs can report a Cross-Reference Event when they replace a lost tag and the previous tag number is known. A Move-In Event is required on the lost tag prior to entering the Cross-Reference Event if the animal is arriving from another location.

WHY REPORT?

A Cross-Reference Event is reported so that the recently applied approved tag is linked to the prior tag number so that the herd of origin and other traceability data is not lost.

CROSS-REFERENCE instructions

ISSUED | EVENT

An Issued Event is used to report approved tags that have been purchased or received from an approved dealer, a neighbour or directly from the CCIA webstore.

WHO REPORTS?

Approved Dealers and CCIA on behalf of stakeholders can enter Issued Events. If a producer buys or receives tags from a neighbour then the approved tag numbers need to be transferred to the new producer's inventory and this can only be done by contacting a CCIA representative who will then report the Issued Event.

WHY REPORT?

An Issued Event is reported to transfer recently acquired approved tags into the CLTS account holder's Unused Tag Inventory so that those tags are ready for application to the owner's animals. Approved Dealers are required to report an Issued Event within 24 hours of approved tags being purchased.

REPLACED | EVENT

A Replaced Event is used to report an approved tag that has replaced a lost tag and the previous tag number is not known.

WHO REPORTS?

Any location receiving an animal such as a farm, auction, feedlot (intermediate sites) and abattoirs must replace the lost tag and can enter the new tag number as a Replaced Event.

WHY REPORT?

An approved tag is required for all animals that have left the herd of origin and a Replaced Event reports that the animal's tag was replaced by a site that was not the herd of origin. A Replaced Event is reported so that the recently applied approved tag and its associated tag number is entered into the owner of the animal's CLTS account holder's Animal On-Farm Inventory.
