CLTS QUICK REFERENCE

The **Canadian Livestock Tracking System (CLTS)** is a national database created by the Canadian Cattle Identification Agency (CCIA) to centralize animal indicator data in Canada. Here are a few tips for some of the main functions of the CLTS.

ACTIVATING | CCIA/CLTS ACCOUNT

If you have purchased CCIA tags in your name you will already have a CCIA/CLTS account.

The account will be set up with the name, address and phone number that you provided to the Tag Dealer/Distributor at the time of your purchase. Account holders are responsible for keeping their contact information current and a correct email address helps us do traceability business in a timely manner.

The account remains in Placeholder status until it is activated by a CCIA Client Support Representative (CSR). Contact a CSR at 1-877-909-2333.

PREMISES IDENTIFICATION | HOW TO

A premises identification number (PID) is a parcel of land usually defined by a legal land description, on which animals, plants or food are grown, kept, assembled, or disposed of. The PID is required to complete movement events in the CLTS. Each Canadian Province and Territory has specific guidelines for acquiring a PID, and can be found at canadaid.ca/traceability/premises-identification/

Once you have registered your legal land information with your provincial registrar you can add the provincially assigned premises identification number to your CCIA/CLTS account.

ONLINE INSTRUCTIONS: https://support.canadaid.ca/clts/account-user-management/premises-identification-pid/

UPLOADING | INFORMATION

In the CLTS, there are two options to enter data:
Directly Online — entering information directly on the website or

File Upload — uploading information using spreadsheet templates.

Complete instructions are located at:
canadaid.ca/Getting to know the CLTS Fact Sheet

CLTS MOBO | APP

Offers the power of the CLTS at your fingertips. It is available as a free download, wherever you get your APPs.

Features include the addition of practical events, an enhanced submission process and tag input via Bluetooth enabled tag reader. An Offline Mode was added to the APP, which allows users to store data and upload at a more convenient time, or when back in a service area.
