SHEEPTRACE / OCTOBER 2026 COMMUNICATIONS

Getting to Know the SheepTrace Reporting System

PUBLISH WHEN RESOURCES ARE LIVE | PUBLIC INFORMATION

The new SheepTrace reporting system is powered by AgroLedger, technology developed by the Canadian Sheep Federation since 2020. AgroLedger is ready for producer use, and resources are being published to help producers become familiar with it ahead of operational cutover.

Use a web browser

The reporting environment is a web application, accessed using a supported browser on an internet-connected computer, tablet or smartphone. Final browser and access guidance will be issued before producers need to use the system for required reporting.

Explore the how-to resources

The AgroLedger User Manual explains the reporting environment, and short how-to videos demonstrate common tasks. Find them on the Resources page at SheepTrace.ca. These materials are for familiarization; they are not instructions to stop reporting through CLTS.

Moving existing records

Transfer of existing sheep traceability information from CLTS into AgroLedger is underway. SheepTrace will provide further information about access to historical records as transition arrangements are confirmed.

Paper and phone options

Paper-based reporting options are being developed for producers who prefer not to use online tools. Two full-time support staff start November 2 and, following onboarding, will assist users with questions and reporting. Email info@sheeptrace.ca for enquiries; service availability will be announced.

Regulatory requirements stay the same

The transition changes program administration and reporting technology, not applicable federal traceability requirements. The same requirements continue during and after cutover; any future regulatory amendments are separate.

Before December cutover

Continue submitting required reports through CLTS and buying approved sheep tags through the usual channels. The planned cutover is December 9, subject to readiness and approval. SheepTrace will issue specific account, reporting and timing instructions before action is required.

See the resources

Visit SheepTrace.ca and select Resources to access the user manual and instructional videos once published.

CURRENT GUIDANCE • Continue reporting through CLTS until SheepTrace issues instructions.
